## Technology at work for you

### ACECONNECT INTEGRATION TEMPLATES SAVE TIME AND MONEY!

Typically, ACEConnect reduces costs by eliminating data re-entry by offering businesses with an existing online storefront, web service, or data source the ability to integrate to Microsoft Business Solutions. Using a series of transactional business objects, ACEConnect offers fast and accurate integration from outside data sources to Microsoft Dynamics GP ACEConnect Templates.

Typically, another area where business logic needs to be extended is incoming orders, invoices, or sales documents. There are Pre and Post SQL procedures embedded for each schema available that users can modify to fit their business needs.

INTEGRATION SOLUTIONS

## flexible solutions for your business needs

### HOW ACECONNECT WORKS

- Create an output file
- Apply business logic in ACEConnect
- Drop file in Shared Directory
- Let ACEConnect do the rest

### BENEFITS

*Enhance your offering*—ACEConnect supports the ability to access data in real-time. This allows you to build applications that connect to your financial management data so that you can share information back and forth between multiple applications.

### HOW ARE OUR CLIENTS USING OUR SOLUTION

- Journal Entry Uploads
- Payroll Entry Uploads
- Expense Solution Integrations such as Concur
- Point of Sale Integrations
- Property Management Solutions
- Requisition and Purchasing Systems
- Reservation Systems
- Any application that can produce an output file for integrations

*Leverage industry standard technologies*—ACEConnect includes components for Microsoft Message Queue (MSMQ) and BizTalk Server, industry standard tools that allow you to tightly integrate your applications, build highly-reliable and fault-tolerant systems while automating data exchange for you our customers.

*Reduce development costs*—ACEConnect allows smooth flow of information directly from your applications to Microsoft Dynamics GP, and vice versa. It provides a large number of integration points in to Microsoft Dynamics GP that can be called direct or can be used to pass XML documents in and out of Microsoft Dynamics GP. This increases your return on investment by freeing up resources to focus on other critical activities.
